

The ocellated frogfish is known for a specially adapted dorsal fin located just above the fish's mouth. The fin is stalk-like with a fleshy tip, and the frogfish can wiggle it to mimic the appearance and movement of small sea creatures. This behavior attracts other species of fish that prey on the creatures being mimicked. Which term best classifies the interaction between the frogfish and the other species of fish it attracts? A.

predation

B.

parasitism

C.

competition

D.

symbiosis

Answer: A. predation

Predation is kind of interaction among species, in which one organism kills the other organisms in order to obtain it's food. The organism which feed upon other organisms is called as a predator and the the organism being consumed is called as prey.

The dorsal fin is a kind of camouflage to disguise prey organisms, so that the frogfish can obtain it's food by attracting and killing small sea creatures. Therefore, it is a predation type of interaction between the frogfish and other species of fish it attracts.

I would say predation

Jacques Cartier sailed to the new world in 1534 in search of

Abraham proposed which of the following ideas to the of Ur Central government

belief in many gods

belief in one god

rule of law

A rectangular birthday present, 3 in. by 7 in. by 8 in., is covered by wrapping paper. How much wrapping paper is required

Amanda bought a bag of parsnips that weighed $3\frac{7}{8}$ pounds. She also bought a bag of turnips that weighed $2\frac{1}{2}$ times as much as the parsnips. How many pounds of turnips did Amanda buy?

1) To the following describes a major difference between legislators at the federal and state levels. Help me please A) any state legislators are appointed rather than electing

B) many state legislators do not live in the district they represent

C) many state legislators were previously federal legislators

D) many state legislators do not work full-time

2) what power do all current state constitutions a grant to the state government

A) Power to hold a recall elections

B)The power to nullify the laws of other states

C)The power to establish labor nations

What is one reason there's a need for government inspections of Antarctic facilities? A. To monitor the impact on the environment B. To determine the economic value of common assets C. To create more government jobs D. To exploit the environment for economic growth

The circumference of a dinner plate is 15.7 inches. what is the radius?

Which of these things is used to make special carpets in honduras
