

**Let  $g$  represent the minimum amount of money Jamie needs to earn to pay his bills. Jamie works part time at an accounting firm. He gets paid by the task: the more difficult the job, the more money he earns, Jamie needs to earn \$875 to pay his bills. This week, he completed five tasks that paid \$80, \$75, \$145, \$250, and \$80, respectively. Jamie has one more task to complete. What is the minimum amount he needs to earn on his last task to pay his bills?**

Jamie has earned  $\$80 + \$75 + \$145 + \$250 + \$80 = \$630$  so far this week. He needs to earn an additional  $\$875 - \$630 = \$245$  to pay his bills.

If Jamie only has one last task, he must earn \$245 on that task to pay his bills this week.
