

What is $\frac{4}{9} + \frac{5}{8}$ it's hard

Answer,

$\frac{77}{72}$ or $1 \frac{5}{72}$

Hope this helps :-)

$\frac{4}{9}$

+

$\frac{5}{8}$

=

$(4 \times 8) + (5 \times 9) / 9 \times 8$

=

$\frac{77}{72}$

OR $1 \frac{5}{72}$

A research method used photographs of people exhibiting different facial expressions and required participants to label the emotion demonstrated in each photograph. what did this procedure reveal?

Show that the number is rational by writing it as a quotient of two integers--- the number is 1.

What type of economy does North Korea have?

Put these numbers least to greatest using less than or greater than signs

6.11, 5.1392, 6.1, 6.101

News or program on TV. Reliable or relevant?

How does the dress and demeanor of the delegates to the Continental Congress suggest regional diversity?

Identify the period and group of the element that has the electron configuration $1s^2 2s^2 2p^6 3s^2 3p^3$. a. period 2, group 2A

b. period 3, group 1A

c. period 3, group 3A

d. period 3, group 5A

Federal law requires that the employer withhold _____ from the employee's pay.

The United States became a(n) _____ nation because of all the funds it loaned to its European allies during World War I. warring indebted creditor Allied

What was the initial plan for governing the United States?

You have one semester left to graduate and you have the finances to do a maximum of four courses. Three of the courses are required courses. The last course slot belongs to an elective. You have narrowed down your choices to three electives, all of which are very popular and very useful courses that you are very interested in. Decide on the course you want to take. Then using at least two economic decision-making principles, explain why you are making this choice.

A preschool age child has honeycrusted lesions on erythematous, eroded skin around the nose and mouth, with satellite lesions on the arms and legs. The child's parent has several similar lesions and reports that other children in the day care have a similar rash. How will this be treated? A. Amoxicillin 40 to 50 mg/kg/day for 7 to 10 days

B. Amoxicillin-clavulanate 90 mg/kg/day for 10 days

C. Bacitracin cream applied to lesions for 10 to 14 days

D. Mupirocin ointment applied to lesions until clear
