

GCF of 35 and 63. Show your work.

Answer:

Step-by-Step-The GCF of 35 and 63 is 7. To find the GCF, we will start by listing the factors of 35 and listing the factors of 63. We see that the factors that are common to both 35 and 63 are 1 and 7, and the greatest of these is 7. Therefore, the greatest common factor of 35 and 63 is 7. step explanation:

Answer:7

The answer is 7 because you list all the greatest common factor

Estimate the number of water droplets, each of radius 0.05 mm, in a cloud that will provide 5 mm of rainfall for metropolitan (urban) Halifax.

Write an expression for the calculation double the number 18 and then add 14 divided in half

The quotient of a number and eight, increased by $\frac{3}{4}$, is at least $-\frac{1}{4}$

The industry-based view posits that the degree of competitiveness in an industry largely determines firm performance. a. True b. False

How should problem be understood ? write your own words .?
