

If you hold a permanent magnet the wrong way in an extremely strong magnetic field, its magnetization will be permanently reversed. What happens to the magnetic domains inside the permanent magnet during this process?

Answer: The domain that is aligned with the applied field will grow, while the domain that is oppositely aligned to the magnetic field will shrink, this is because permanent magnets produce their own magnetic field.

Ms Patil bought 4 packs of pencils for her class. Then she bought 3 more packs of pencils. There are 12 pencils in a pack. How many pencils did she buy?
The ocellated frogfish is known for a specially adapted dorsal fin located just above the fish's mouth. The fin is stalk-like with a fleshy tip, and the frogfish can wiggle it to mimic the appearance and movement of small sea creatures. This behavior attracts other species of fish that prey on the creatures being mimicked. Which term best classifies the interaction between the frogfish and the other species of fish it attracts? A.

predation

B.

parasitism

C.

competition

D.

symbiosis

Write an equivalent expression of $4(6x+12)$

Electrolytes are defined as those compounds which...

What is your personal code of ethics? How will you bring that into your profession as a health care professional?

About 2,000 small islands make up _____, which sits just east of the Philippines. Pacifica
