

Determine whether the following statement is true or false. Explain.

Inferences based on voluntary response samples are generally not reliable.

Answer:

True

Explanation:

It is true that inferences that are based on voluntary responses are generally not considered to be reliable. This is because of the problems that voluntary responses usually present. In general, when people voluntarily self report, the results obtained are more likely to be biased. This is true due to two important reasons. First, people who are likely to volunteer are also likely to share certain characteristics, which might mean that they are not truly representative of the population at large. The second reason is that people tend to self report in a biased way, in order to present themselves in a positive light.

And panting at Ralph like dogs is what figurative language?

What activities, if any, do you engage in that could lead to injury or death?

Connor took out a 4-year loan to buy a car at a 4% simple interest rate. If he has to pay \$240 in interest, how much principal did he borrow?

Plyometrics can help a person maintain cardiorespiratory fitness.
