

Why is it important that the mouth and stomach are near the start of the digestive system? thx

Answer: To complete the process of digestion after the food is ingested by mouth.

Explanation:

The food that we eat is ingested by mouth and here the mechanical degradation of food takes place. This breaks down the food into smaller pieces.

Mouth also contains the enzyme that is responsible for the digestion of starch.

Then the food from the mouth reaches the stomach where various types of digestive juices and enzymes are secreted to digest the food.

Hence, mouth and stomach must be near in the digestive system.

Because the mouth breaks down the food and the stomach uses acid to break food down even more
